Business Rules

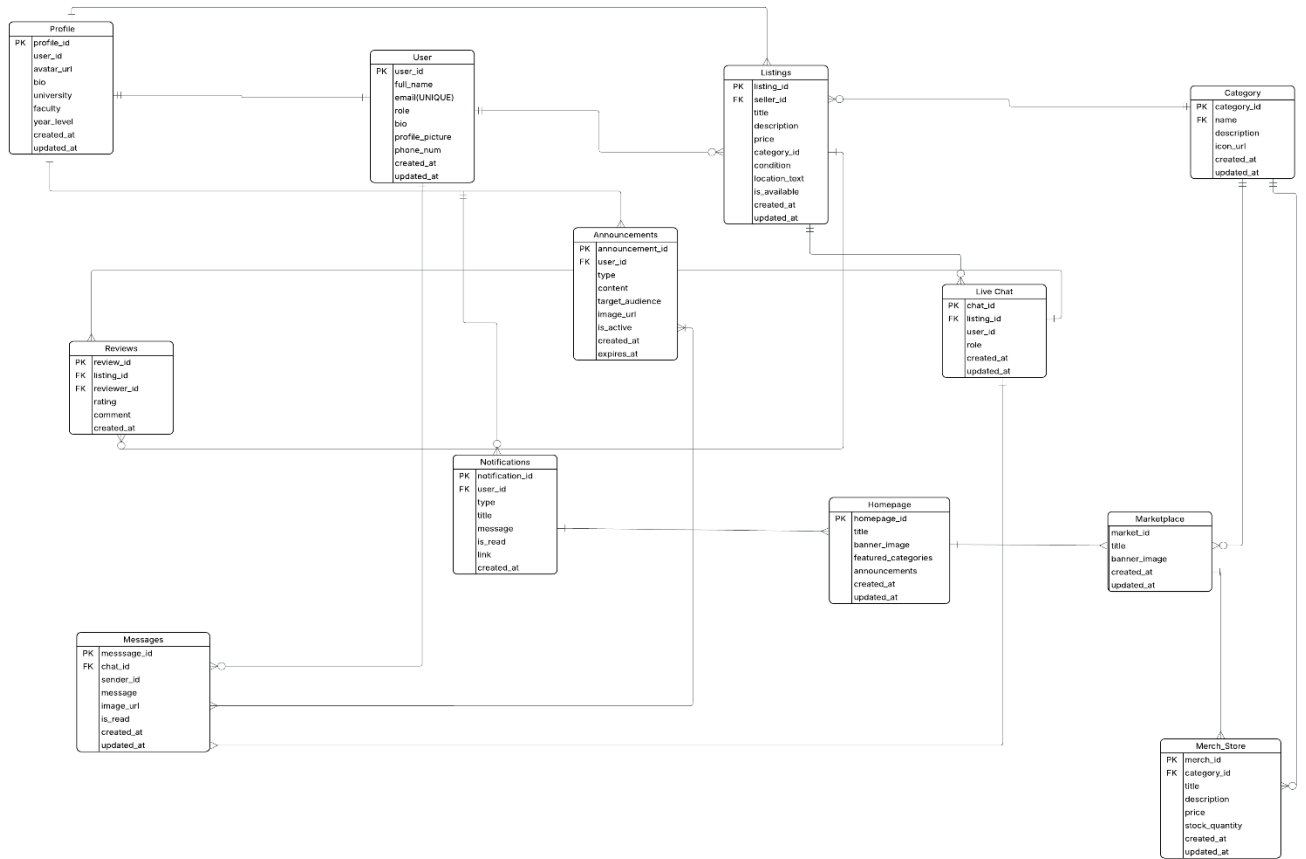

I am responsible for the Marketplace and Messages entities

Marketplace:

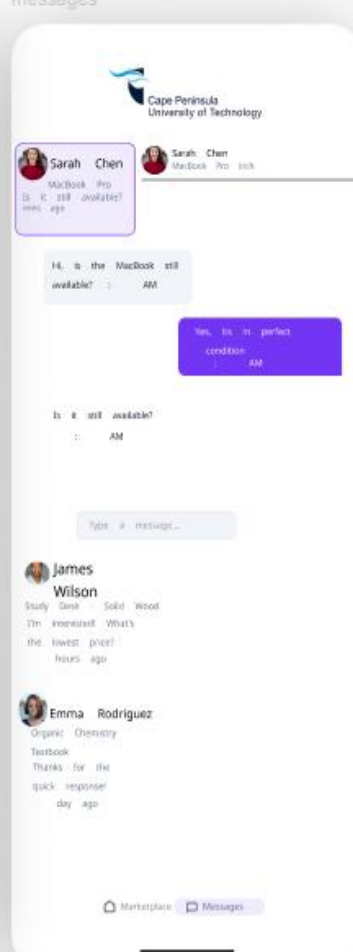

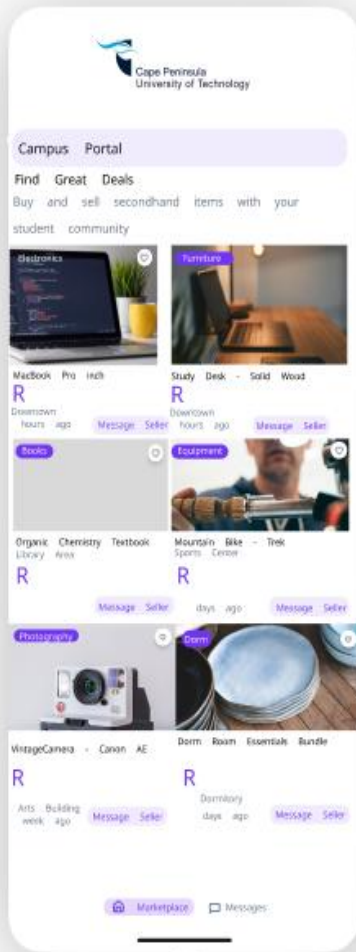

- The marketplace needs to be given a title before it can be made visible to users.
- The marketplace will display an image that will be used to advertise its content to users.
- Only an authorised administration member will be able to create or modify a marketplace.
- The marketplace should only display listings that are marked as available.
- An item on the marketplace must belong to at least one category to be allowed to be listed on the marketplace.
- The marketplace should always remain active even if there is only 1 item listed.

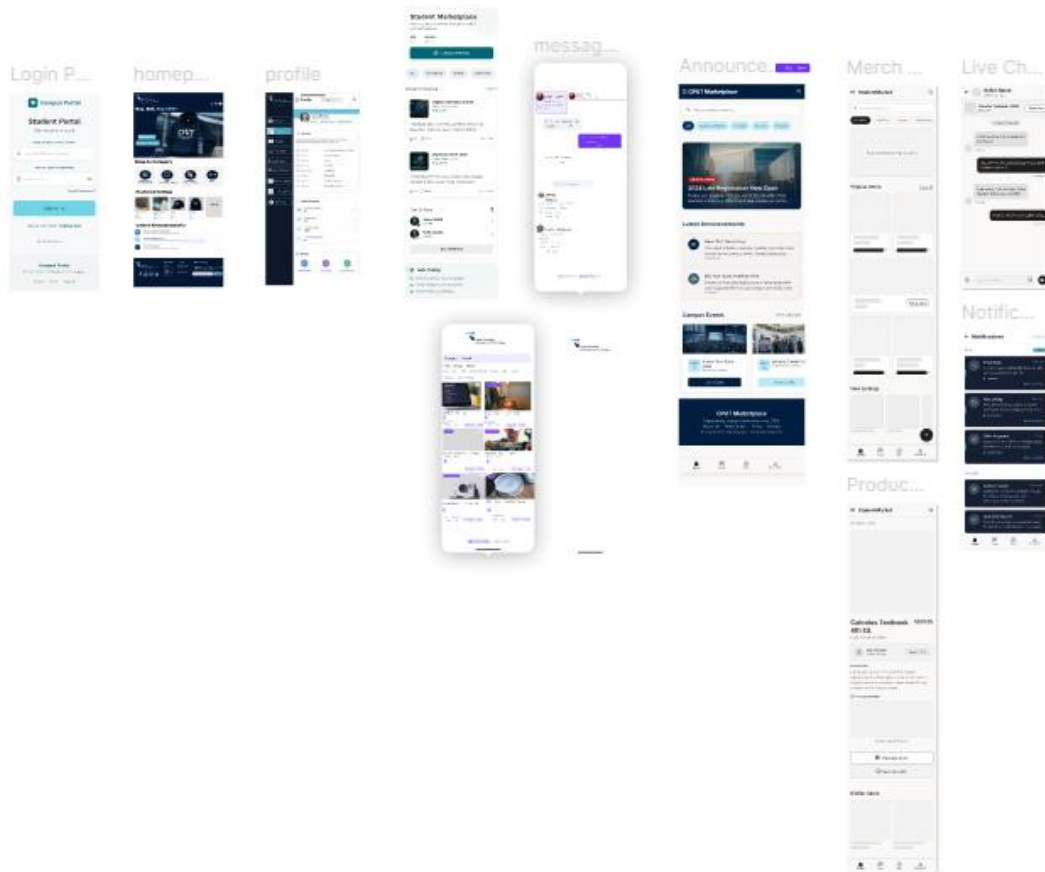

Messages:

- Messages should only be visible to users in the same chat.
- A message must contain either a text or an image before it will be sent.
- A message must be linked to a chat that is still an active chat.
- Only registered and active users can send messages.
- By default, a message should be marked as unread until the user has read the message.
- Users do not have access to messages from chats that they are not part of.
- A user can only start conversation via chat on items that are active listings.
- A message will not be allowed to change once it has been sent.

messages

Reflection

In the current phase of the project, I was given the responsibility of designing and creating the marketplace wireframe as well as the messages wireframe for our Student Marketplace application. As the Project Manager of the group, I was given the responsibility of fairly distributing the tasks between each member, assisting to structure the ERD and ensuring that each member keeps to the business rules that have been set in place. All wireframes that were created including my wireframes were created to ensure user-friendly experience.

As a group we can to a consensus that the theme we want to follow for the wireframes is a Modern theme. Thus, I created the Marketplace & Messages wireframe with easy navigation for the user to allow them to navigate directly from the marketplace to messaging a seller and enquiring about a product, this allows for the wireframes to have a modern professional theme to them.

In terms of the ERD diagram, I was only responsible for two entities and those were the Marketplace and Messages entities. The reason why I was only responsible for those entities is because Marketplace and Messages are only linked to each other since the messages are for communication on products for sale so there was no need for me to focus on other entities.

Challenges that I faced during this phase of the project was remaining patient with my team members as everyone could not always be present during meetings and this created ambiguity in some instances and this would require me as the Project Manager to repeat myself constantly which becomes challenging. Another challenge that I faced was ensuring that my wireframes complimented the other wireframes in terms of look and feel, this challenge was fixed quickly through constant communication in the team.

As a whole, this phase of the project has been very challenging as a Project Manager and as a UI designer, but it has allowed me to become more proficient in creating and designing wireframes, it has allowed me to continue to improve my skills as a leader and it have given me the necessary insight as to what is needed to get the best out of my team members. This has also shown me that there need to be proper preparation before any development can take place, at the moment we have started to create classes for our entities but have not made any further progress to this point.
